

SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: OLGA CHERNYSHEV Examiner #: 78208 Date: 07/08/02
 Art Unit: 1646 Phone Number 305-1003 Serial Number: 09/719,944
 Mail Box and Bldg/Room Location: 10E18 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _____

Inventors (please provide full names): _____

Point of Contact:

Toby Port

Technical Info. Specialist

CM1 8A04

703-308-3634

Earliest Priority Filing Date: 06/15/99

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Please search for 102 art on dietary supplement comprising colostrinin, lactoferrin, selenium (in a form of selenoprotein) and interleukin 1- α . OR: 102 for colostrinin, lactoferrin and selenium and 103 for selenoprotein and interleukin 1- α , and the use of all these ingredients in baby formula (claims 7-8).

Thank you!

STAFF USE ONLY

DOCUMENT TYPE: Journal
LANGUAGE: English

AB A proline-rich polypeptide (PRP) complex, subsequently called **Colostrinin**, was isolated from ovine colostrum. The complex showed immunomodulatory properties in mice, rats, and chickens, inducing maturation and differentiation of thymocytes. It was recently found that **Colostrinin** is a cytokine-like factor that acts as an inducer of interferon .gamma. (IFN-.gamma.) and other cytokines in human peripheral blood and cord blood leukocyte cultures and has psycho-immuno-enhancing activity in volunteers. These observations prompted us to study the effect of **Colostrinin** on patients with Alzheimer's disease (AD). Forty six AD patients were divided into 3 groups and randomly assigned to receive orally either **Colostrinin** (100 .mu.g per tablet, every second day), com. available bioorg. **selenium** (100 .mu.g **selenium** per tablet, every second day) or placebo tablets. One cycle of the treatment lasted 3 wk and was sepd. from the next cycle by a 2 wk hiatus. Each patient received 10 cycles of treatment during the year of the clin. trial. Outcomes were assessed by psychiatrists blinded to the treatment assignment. Eight of the 15 AD patients treated with **Colostrinin** improved and in the 7 others the disease had stabilized. In contrast, none of the 31 patients from the **selenium** or placebo groups with similar mild or moderate AD improved. The administration of **selenium** promoted stabilization in 13 of the 15 patients, whereas in the placebo group only 8 of the 16 patients were stabilized at the 12 mo trials end-evaluation. **Colostrinin** was found to be a remarkably safe drug. Mild and transient effects were anxiety, stimulation, insomnia, and tiredness. The results obtained showed that oral administration of **Colostrinin** improves the outcome of AD patients with mild to moderate dementia. The results are very encouraging and deserve further research.

L53 ANSWER 7 OF 16 CAPLUS COPYRIGHT 2002 ACS DUPLICATE 6
ACCESSION NUMBER: 1999:615086 CAPLUS
DOCUMENT NUMBER: 131:295505
TITLE: **Colostrinin**, a polypeptide isolated from early milk, facilitates learning and memory in rats
AUTHOR(S): Popik, Piotr; Bobula, Bartosz; Janusz, Maria; Lisowski, Jozef; Vetulani, Jerzy
CORPORATE SOURCE: Institute of Pharmacology, Polish Academy of Sciences, Krakow, 31-343, Pol.
SOURCE: Pharmacology, Biochemistry and Behavior (1999), 64(1), 183-189
CODEN: PBBHAU; ISSN: 0091-3057
PUBLISHER: Elsevier Science Inc.
DOCUMENT TYPE: Journal
LANGUAGE: English

AB Initial observations in humans indicated that **colostrinin**, a complex of polypeptides derived from the colostrum of sheep, facilitates cognitive functioning in patients with Alzheimer's disease. Its effect on learning and memory in more controlled settings as well as the specificity of these effects were, however, unknown. The present expts. evaluated the effects of **colostrinin** on spatial learning (Morris water maze) and incidental memory (habituation test) in male Wistar rats of two age

groups. **Colostrinin**, at a dose of 4 .mu.g/rat IP, facilitated acquisition of spatial learning of 13- (aged) but not 3-mo-old (young) rats. At the same dose, it improved incidental learning in aged rats, while the dose of 20 pig/rat attenuated it. **Colostrinin** did not change locomotor activity of rats. Taken together, the present findings indicate that **colostrinin** may have some beneficial effects on cognitive functioning, particularly in aged subjects. Given the fact that colostrum is the first nutritive agent of neonates, it might be speculated that its peptides may facilitate the early postnatal development of the cerebral neurons and their plasticity.

AB The present invention provides methods that utilize compns. contg.

colostrinin, an constituent peptide thereof, an active analog thereof, and combinations thereof, as an oxidative stress regulator.

AB The aim of this study was to elucidate the structure and possible function of **colostrinin**, also known as a proline rich polypeptide (PRP). The mol. wt. of **colostrinin** was originally detd. by gel filtration to be 17,200 daltons. In the presence of guanidinium chloride, however, the mol. wt. was found to be about 6,000 daltons. Further studies utilizing high-performance liq. chromatog. (HPLC) and mass spectroscopy revealed that **colostrinin** is a complex consisting of many low mol.-wt. polypeptides. A total of 32 peptides were isolated from the original **colostrinin** prepn. by HPLC and subjected to the N-terminal sequence anal. The results of sequence anal. revealed significant homol. of the peptides to three protein precursors: annexin, .beta.-casein, and a hypothetical .beta.-casein homolog. In addn., the sequence of several peptides showed no significant homol. to any specific protein in the current GenBank database. The synthetic peptides of various lengths representing the N-terminal sequence of the **colostrinin** peptides were made to study some biol. effects. Here we report that **colostrinin** and some of its component peptides are potent inducers of leukocyte proliferation and of certain cytokines. Also, a series of monospecific antibodies were produced in rabbits against the synthetic peptides. The antibodies were used to study the kinetic of antigen redn. in colostrum and mature **milk** following lambing. A threefold decrease was common for most antigens studied over the period of 72 h. Based on the results of these studies we postulate that **colostrinin** represents a diverse group of peptides produced in the mammary gland of mammals for the development of the optimal physiol. responses in offspring. Also, it is hoped that the beneficial use of **colostrinin** in Alzheimer's disease, recently reported elsewhere, will revive interest in its clin. application for treatment and/or prophylaxis of many age-related disorders.
